

Lantania in GWI's Top 20 for leading desalination plant suppliers

- The prestigious international publication specialised in the water market ranks the company 15th in its annual ranking

Madrid, 27 October 2022. Lantania has entered the Top 20 of the world's leading desalination plant suppliers by contracted capacity (2012-2022) prepared by the Global Water Intelligence (GWI) magazine. The Infrastructure, Water and Energy Group is ranked 15th in the list compiled by one of the most prestigious international publications in the water sector.

The company has appeared in the ranking for the first time with a portfolio of desalination projects installed and in operation of 645 billion cubic metres/day. The Moncofa desalination plant in Castellón and the Jubail 3A plant in the Eastern province of Saudi Arabia are among its most important projects.

Lantania, which launched a Desalination Division at the end of last year, carries out the design, procurement, construction, operation and maintenance of desalination plants worldwide. It provides efficient solutions based on innovative, sustainable technologies that are respectful of the environment where they are located, solving the problems of water scarcity in areas with a water deficit.

Knowledge of the desalination market and business, together with its international positioning, allows Lantania to take on large, optimised, competitive projects adapted to the needs of its clients. The company has a multidisciplinary team with more than 15 years of experience that integrates the latest technological advances in its plants, such as low-consumption reverse osmosis membranes, state-of-the-art energy recovery systems and ring pressure centres.

Global Water Intelligence (GWI) is one of the leading international publications on business information for the water sector. Its magazine is published monthly in print and online.
