

Lantania adopts Supply Chain Catalyst tool for supply chain management

- Moody's Analytics platform will enable the Group to assess the ESG performance of its suppliers

Madrid, 19 December 2023. Lantania is taking another step towards consolidating sustainable and responsible practices. The infrastructure, water and energy group has incorporated the Moody's Analytics' Supply Chain Catalyst tool into its supply chain management strategy.

The implementation of this platform will enable the company to carry out comprehensive monitoring of its supply chain by giving it the ability to fully assess supplier performance on key environmental, social and governance (ESG) factors. One of the functionalities of this tool is the ability to assign a sustainability score to the companies that Lantania works with on a daily basis, which will allow it to identify and work with those that share its objectives in terms of sustainability and ESG risk mitigation.

Supply Chain Catalyst is an analytics and data platform for monitoring and managing supplier risk. It helps companies and governments identify structural weaknesses and anticipate potential disruptions in their supply chain by providing a holistic view of suppliers across financial, operational, compliance, ownership, reputational, geopolitical, sustainability, ESG and cyber risk factors.
